The Arizona State University School for the Future of Innovation in Society’s one-year Master of Science & Technology Policy program (MSTP) uniquely prepares our graduates to have an impact in today’s technologically complex world. Drawing on some of the world’s leading experts and innovative thinkers, we are training future leaders, policy makers and analysts in tackling complex issues that range from climate change, energy security and responsible innovation, to public health, global development and social justice.

The MSTP program is suited to anyone interested in a career where they work to ensure that science and technology serve society through responsive and effective policy development and implementation. Our students come from a very wide range of backgrounds, and go on to develop successful careers in government, business, academic institutions, and non-government organizations.

What are the benefits?

- One-year program (full time) or two-year program (part time)
- A program that tailors learning to career goals
- Opportunities to participate in diverse, relevant research projects
- The opportunity to work with internationally renowned experts
- An intensive, immersive capstone experience in the nation’s capital
- Networking with science & technology policy leaders
- Career opportunities in government, business, academic institutions, and non-government organizations

What will you learn?

- Historical, social and institutional foundations of science & technology policy
- Critical skills and methods for policy analysis and development
- Effective policy communications skills and techniques
- Career path-specific knowledge and expertise
- Working effectively with scientists, policy makers, elected officials, and others
- Cutting edge approaches to ensuring socially responsive and responsible technology innovation
